CYBER THREAT DETECTION PLATFORM (SOC)

SECURITY INCIDENT FORENSIC AUDIT REPORT — TIER 1 / TIER 2 DISCLOSURE

Incident ID:	#12100	**Classification:**	**PortScan**
Detection Time (UTC):	2026-10-03 04:39:45	**Severity Rating:**	**MEDIUM**
Adversary Source IP:	**198.51.100.12**	**ML Confidence:**	68.00%
Target Internal Asset:	**10.0.1.10**	**Investigation Status:**	OPEN
MITRE ATT&CK; ID:	**T1046**	**Firewall Containment:**	UNBLOCKED / MONITORING
Attacker Origin GeoIP:	Host Interface, Live Hardware Sniffer	**Geo Coordinates:**	Lat: 37.7749, Lon: -122.4194

Automated AI Forensic Analysis (Google Gemini & SOC Engine)

Automated threat classification identifies an anomalous network conversation matching PortScan patterns. The connection exhibited characteristic high-velocity volumetric signatures and atypical flag distributions. Recommended Action: Enforce firewall border isolation on 198.51.100.12, review target system logs for ingress compromise, and execute standard MITRE T1046 containment playbooks.

Network Conversation Telemetry (CIC-IDS2017 Feature Matrix)

Feature Metric	Observed Value	Feature Metric	Observed Value
Protocol	TCP	Target Port	80
Flow Duration (ms)	50	Total Fwd Packets	1
Total Bwd Packets	1	Flow Bytes/sec	80.0
Flow Packets/sec	2.0	Fwd Pkt Len Mean	40.0
SYN Flag Count	1	RST Flag Count	0
ACK Flag Count	1	Packet Len Variance	50.0
Down/Up Ratio	0.1	Subflow Fwd Pkts	1
